

Assignment 3

GrapeCity

~Sanjeevani Agarwal

UI Test Cases

- Verify that the Tip Calculator UI has these mentioned input fields: Bill, Tip %, Number of People, and Calculate button.
- Verify that the "Bill", "Tip %", and "Number of People" fields accept only numeric input.
- Verify that if any field is not mentioned and Calculate button is clicked then it displays error message.
- Verify that the output fields on clicking calculate button are displayed with the following headings: OUTPUT, Tip per Person, Total per Person.
- Verify that the output fields are displayed with the currency symbol.

Functional Test Cases

- Verify that the Tip Calculator calculates the correct "tip per person", and "total per person" based on the bill amount, tip percentage, and number of people.
- Verify that the Tip Calculator displays an error message if any of the input fields contain invalid values or are empty.
- Verify that the Tip Calculator works well without refreshing the page again in case of multiple usage.
- Verify that the Tip Calculator is responsive and works on different devices and screen sizes.
